

May 18th Spencer Town Council
Street Department report

The new John Deere ZTR mower is in and makes a wonderful addition. My crew and I appreciate it very much.

Contractor work has started on the East St/ Hillside drainage project. As of now the connection on East street is complete and the entire scope of work should be done this week if Mother Nature cooperates.

The sale of the two surplus Dump trucks is complete for \$4,999. Payment has been made in full to the town however there was some trouble on the towns part locating the titles to these trucks... Cheryl is working on it.

Our F450 truck is currently in Fishers getting the new dump bed installed. The Truck is scheduled to be picked up tomorrow (Tuesday). There was an issue the service team found where the entire back hitch supports, bumper, and wiring were completely rusted off. They advised me they could replace and repair all of this while they had it tore apart for an additional \$700 above the original approved quote. I called Board members Mr. Bruce and Mr Spinks and got verbal approval to have this work done however Mr Spinks advised an official approval needed to be voted on this meeting.

Lastly, I got word from the company repairing our truck lift that the factory making the columns was back in operation post COVID-19 shutdown and the columns have been shipped and should be arriving any day with repairs to complete just as soon as the columns arrive.
